

HOW TO PLAY

Preparation

Print all pages single-sided. Cut out the 5 images and 3 facts. Laminate and cut out again.

Playing

Match the images to the fact you think is correct

Hint: One or more of the facts has more than one picture!!

A - Does not decompose or biodegrade in a landfill because there is no oxygen for it to carry out the processes. Is one of the most harmful things we put in the landfill because it produces methane

B - Can be put in the recycling bin in Auckland but will not actually be recycled. They are allowed into the recycling bin, to appease Aucklanders who wanted them to be recycled, under the contamination tolerance but they are removed and sent to landfill

C - Is made with conventional plastic. Has an additive that allows the product to biodegrade – but that won't occur in landfills because there's no oxygen. This applies to many other 'biodegradable' products

ANSWER SHEET

1 = A

2 = A

3 = A

4 = A

5 = C

6 = B

7 = B

8 = B
